

Mutual Fund Risk/Return Summary Taxonomy 2010

Sample Instances

Date 2010-04-06

Table of Contents

1	Goals	1
2	Examples	1
3	Report Folder	1

1 Goals

The purpose of this document is to describe a set of sample instances of the US Mutual Fund Risk/Return Taxonomy 2010, insofar as they illustrate how actual Risk/Return Summaries appearing in EDGAR forms 485BPOS or 497 would be encoded.

These samples accompany and support the Rendering instructions.

2 Examples

The root folder contains one folder for each example.

Folder / Instance	Original Format	Prospectuses or Stickers	Series per Prospectus	Classes per Series
alfalfa / alfalfa-20090501.xml	Plain Text	1 Prospectus	1	4
cabbage / cabbage-20090501.xml	HTML	1 Prospectus	4	1
dandelion / dandelion-20090711.xml	HTML	1 Sticker	1	3
eggplant / eggplant-20090701.xml	Plain Text	3 Prospectuses	1 common to all three	Subsets of 6 classes

Each instance has a custom schema, definition, presentation, label and in one case, a calculation linkbase.

3 Report Folder

A **report** folder for each example contains a file preview.htm and .jpg files that represent the result of rendering that instance using the SEC Viewer/Previewer.
